05 CULTURAL CENTER

Public & Cultural Architecture – 2019

Location: Beyoğlu, Istanbul, Turkey

Urban Context Analysis

The urban context analysis examines pedestrian activity, transportation networks, environmental conditions and key visual connections surrounding the project site in Beyoğlu.

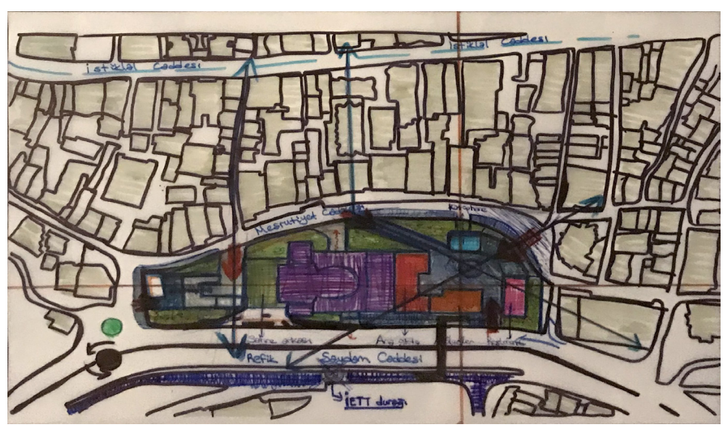

Site Strategy & Design Approach

The project organizes cultural and public functions around a central urban plaza, establishing a pedestrian-oriented relationship with the surrounding urban fabric. Connections from İstiklal Caddesi via Odakule Passage and from Şişhane Metro strengthen access to the site and define a sequence of public and semi-public spaces.
