02 URBAN CAMPUS PROJECT

Educational Architecture – Istanbul, 2023

Project Description

Located in Istanbul, this university campus integrates educational, cultural, and social functions within a cohesive architectural composition. The project includes academic faculties, studios, laboratories, a library, an auditorium, and shared social spaces.

Organized around a clear circulation axis, the campus connects its buildings through pedestrian routes, courtyards, and landscaped open spaces. The modular building arrangement balances functional independence with spatial continuity, encouraging interaction and creating an integrated campus environment.
